Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

(1) Claim 1, line 9, after "resin," insert "and wherein the coloring agent comprises a pigment".

2. Authorization for this examiner's amendment was given in a telephone interview with Roger Lee on 8/11/06.

Statement of Reasons for Allowance

3. The present claims are allowable over the “closest” prior art Kato (U.S. 6,302,537), Suzuki et al. (U.S. 5,254,425) and Qian et al. (U.S. 2002/0128349) for the following reasons:

Kato discloses method of forming an image by ink jet recording using an oil-based ink comprising discharging the ink from the ink jet printing device wherein the ink comprises non-aqueous dispersion medium and fine particles comprising colorant that is pigment and block polymer, i.e. binder, comprising soluble component block and insoluble component block obtained from monomer containing an aliphatic cyclic hydrocarbon group having, for instance, 5 carbon atoms, wherein the colorant is incorporated into the block polymer. However, there is no disclosure or suggestion in Kato of dispersant for the pigment as now required in all the present claims.

Suzuki et al. disclose method of forming an image from oil-based ink using ink jet system wherein the ink comprises non-aqueous dispersion, dispersant, and colorant, i.e. fine particles, comprising pigment and binder that is graft copolymer obtained from monomer containing aliphatic hydrocarbon group such as cyclohexyl acrylate and macromer that is soluble in the non-aqueous dispersion. However, Suzuki et al. disclose that the fine particles comprise binder that is graft copolymer which is in direct contrast to all the present claims that require binder that is block copolymer.

Qian et al. disclose method of forming an image by ink jet recording using an oil-based ink in an ink jet printer which would inherently discharge ink onto substrate wherein the ink comprises non-aqueous dispersion medium and fine particles comprising pigment and graft copolymer binder obtained from monomer including trimethylcyclohexyl methacrylate and alkyl

(meth)acrylate such as lauryl (meth)acrylate or octadecyl (meth)acrylate. However, Qian et al. disclose that the fine particle comprise binder that is graft copolymer which is in direct contrast to all the present claims that require binder that is block copolymer.

Thus, it is clear that Kato, Suzuki et al., and Qian et al., either alone or in combination, do not disclose or suggest the present invention.

In light of the above, the present claims are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
